SUMMARY

Gameplay programmer and game development student focused on Unreal Engine/C++ and Unity/C#. Experience building combat systems, enemy coordination, multiplayer synchronization, procedural and chunk-based terrain systems, data-driven gameplay, optimization, and animation/mocap integration across solo and team projects. Additional experience with Python, SQL/MySQL, Roblox Studio, and 3D production tools used alongside game-development workflows.

TECHNICAL SKILLS

Game Engines: Unreal Engine 5.8, Unity, Roblox Studio

Programming & Data: C++, C#, Python, SQL/MySQL

Gameplay & Technical: Gameplay systems, combat systems, enemy AI, multiplayer synchronization, procedural generation, chunk-based terrain, optimization, Unity ScriptableObjects, animation/mocap integration

Creative & Production: Blender, Maya, Substance Painter, After Effects

PROJECTS

Ren: Path of Destiny | Unreal Engine 5.8, C++

Game Programmer | June 2026 - Present

- Implemented enemy coordination using the Hungarian algorithm to assign active enemies to tactical combat positions while minimizing total assignment cost.
- Developing gameplay systems for a crowd-control beat-em-up, including combat interactions and environment mechanics that connect combat abilities with traversal and obstacle challenges.
- Integrated animation and mocap-oriented workflows alongside Unreal Engine gameplay systems to support responsive character movement and combat presentation.

Digging Game | Unity, C#

Solo Game Programmer, Artist and Designer | 2026

- Implemented chunk-based sand terrain that groups blocks into shared chunk representations, reducing per-block GameObject overhead and supporting scalable destructible terrain.
- Built a data-driven chest spawning system with Unity ScriptableObjects, exposing chest counts and rarity per chunk so balancing can be adjusted without changing gameplay code.
- Combined gameplay logic, progression, block interaction and optimization work with 3D asset production for a complete solo prototype.

Ruin Runners | Unity, C#

Solo Game Programmer, Artist and Designer | 2025

- Implemented real-time movement synchronization and packet-management logic for a two-player online multiplayer game across 10 progressively difficult levels.
- Built gameplay and progression systems around synchronized two-player play, using Unity networking workflows to support real multiplayer testing.

Word Search | Unity, C#

Game Programmer | 2026

- Built randomized word grids across 30 levels with five-level difficulty tiers, and exposed time limits and word counts through ScriptableObjects for balancing in the Unity Inspector.

GAME JAMS

Completed three game jams: Lost Trance (Global Game Jam 2026), Ben 3 (BYOG 2025), and Bubble Parkour (Global Game Jam 2025). These projects provided rapid-prototyping experience under short production timelines and collaborative game-development constraints.

EDUCATION

B.Sc. Game Design and Development

ICAT Design and Media College | August 2024 - June 2027 (Expected)
